TRANSITOS

CLIENT HANDOVER

Branch Onboarding & Operations Guide

Setting up a branch, and running trips, people, fleet and cash on TransitOS.

APPLIES TO

TransitOS v1.2.0
Expo app + TransitOS API

AUDIENCE

Head office, branch managers, fleet and finance staff

ISSUED

3 November 2026
Version 1.0

This guide tells you what to do, in what order, and by whom. It is a companion to the User Manual, which explains what every screen looks like. Every screen path and button name in here has been checked against the shipping app.

Contents

Every entry below is a link — click it to jump straight to that section.

0 · How to read this 4

How the app is laid out 4

Part 1 · Before you start 4

1.1 What you need from us (the developers) 4

1.2 The ten roles, in plain English 5

1.3 The first three accounts 5

Part 2 · Company setup (do once) 5

2.1 Create the first branch 5

2.2 Review the permission matrix 6

2.3 Create the company-level accounts 6

Part 3 · Onboarding a branch 7

3.1 The branch record 7

3.2 Vehicles 7

3.3 Drivers and conductors 7

3.4 Staff accounts for this branch 8

3.5 Routes 8

3.6 Your branch is live 9

Part 4 · Daily operations 9

4.1 The daily loop at a glance 9

4.2 Log fuel — before the vehicle moves 9

4.3 Create the day's trips 9

4.4 The pre-trip checklist 10

4.5 The live board and the live map 10

4.6 Scanning QR codes 10

4.7 Report an incident 10

4.8 Record expenses 11

4.9 Log maintenance 11

4.10 The app updates itself 11

Part 5 · The money loop 11

5.1 How the money flows 12

5.2 The five screens 12

5.3 Step by step: a trip from planned to cashed up 12

5.4 Where the "expected" figure comes from 13

5.5 Who can do what in the money loop 14

5.6 If the numbers do not agree 14

Part 6 · When something goes wrong 14

Appendix A · Who can see and do what 15

Appendix B · The life of a trip 16

Appendix C · Words you will meet 17

A last word 18

Audience: the client team — head office, branch managers, fleet and finance staff. **Applies to:** TransitOS v1.2.0 (Expo app + TransitOS API). **Date:** 3 November 2026.

> You already have the *User Manual*, which explains what every screen looks like. This document is the other half: **what to do, in what order, by whom** — so you can open a branch and start running trips on it. Use this to set up; use the User Manual to look things up.

0 · How to read this

Part	What it is	Who does it	How often
1	Before you start — what you need and who does what	Head office	Once
2	Company setup — the first branch, the first accounts	Head office	Once
3	Onboarding a branch	Branch manager	**Per branch**
4	Daily operations — the working day	Everyone	Every day
5	The money loop	Finance + branch manager	Every trip
6	When something goes wrong	Everyone	As needed
A–C	Role matrix, trip life cycle, glossary	—	Reference

Every step says **"You need: "**. If you do not have that role, the screen is not on your phone — that is by design, not a fault.

How the app is laid out

The app has a bar of **tabs** along the bottom and a **More** menu holding everything else.

- **Tabs:** Home · Trips · Vehicles · More · Reports · Profile
- **More** groups its tiles into four sections: **Operations** (Trips, Vehicles, Branches, Users, Conductors, Routes, Live trips, Live map, Transfers) · **Finance** (Cash Ups, Expenses, Settlements) · **Fleet** (Fuel, Maintenance, Incidents) · **System** (Notifications, Audit log, Role permissions, My devices, Sync).

Which tabs and tiles you get depends on your role — see **Appendix A**. Not everything is everywhere: a driver gets Home, Trips, More and Profile and nothing else.

Part 1 · Before you start

1.1 What you need from us (the developers)

Three things must be in place before any branch can start. Without them the app opens but every request fails.

#	What	Why it matters	Who provides
1	**A live TransitOS API URL** and the sign-in details for your first account	Every screen talks to this server.	Developers → head office
2	**The Android APK** (or an Expo Go install with the app)	The app itself.	Developers → branch managers
3	**Your first three accounts** — see 1.3	Nobody can create accounts without one of these.	Developers → head office

1.2 The ten roles, in plain English

Role	Think of them as	Day-to-day work
`super_admin`	The developers' operator	Rarely used by you. First account only.
`owner`	The owner of the company	Signs off on everything
`general_manager`	The operations director	Runs the whole company from one screen
`branch_manager`	**The owner of one branch**	**Runs their branch day to day**
`operations_manager`	The dispatcher	Plans trips, watches the fleet
`fleet_manager`	The fleet supervisor	Vehicles, drivers, conductors, maintenance
`chief_accountant`	The group accountant	Cash-ups and settlements, company-wide
`branch_accountant`	The branch bookkeeper	Cash-ups and settlements for one branch
`driver`	The driver	Their own trip, pre-trip check
`conductor`	The conductor	Their own trip, passenger manifest, cash-up

Start with three people per branch: a branch manager, a conductor and a driver. Add the rest later.

1.3 The first three accounts

Email	Password	Role
`admin@transitos.app`	`Admin#Transit2026!`	Platform admin
`owner@transitos.app`	`Owner#Transit2026!`	Company owner
`gm@transitos.app`	`Gm#Transit2026!`	General manager

> **Change these passwords on first login.** They are printed in this document and in the developer handover — treat them as temporary.

First sign-in: open TransitOS → enter email and password → you land on the **Home** screen. "Invalid email or password" means the email was typed with capitals, Caps Lock is on, or the account is not Active.

Part 2 · Company setup (do once)

> YOU NEED: `OWNER`, `GENERAL_MANAGER` OR `SUPER_ADMIN`.

2.1 Create the first branch

Your first branch must exist before you can create staff, because four roles are **branch-scoped** — the app will not create them without a branch.

More → Operations → Branches → tap "Add branch"

Field	Rule	Example
Name	The name people will say out loud	Lagos Island Terminal

Field	Rule	Example
Code	**Short, uppercase, unique.** Appears on every trip, cash-up and settlement.	LOS
City		Lagos
State		Lagos
Address		1 Marina Road, Lagos Island
Phone		+234 800 000 0001
Email		lagos@transitos.app

> **The code is permanent.** It identifies the branch on every trip, cash-up and settlement forever. "LOS-01" is better than "LAGOS" if you will ever open a second Lagos branch.

> **Tip:** the **Home** screen also has a **Branch** quick action that opens the same form — handy once you are used to the app.

2.2 Review the permission matrix

More → System → Role permissions lists what each of the ten roles can do. You do not need to change anything — just open it once and confirm the rows you expect are there.

2.3 Create the company-level accounts

More → Operations → Users → tap "Invite user"

Create these first — everyone else depends on them:

Person	Role
Head of operations	`general_manager`
Group accountant	`chief_accountant`
Fleet supervisor	`fleet_manager`

How to fill the form:

1. **Full name** — as it should appear on approvals and audit logs.
2. **Email** — this is their username. Lower case, no spaces.
3. **Phone** — optional but recommended; it shows on the live board.
4. **Role** — pick from the list.
5. **Branch** — leave blank for company-wide roles (`owner`, `general_manager`, `operations_manager`, `fleet_manager`, `chief_accountant`). **Required** for `branch_manager`, `branch_accountant`, `driver` and `conductor`.
6. **Temporary password** — the app generates one. Tap **Regenerate** until it is something you can read out over the phone, then tap **Invite user**.

> **Give the password securely** — a phone call, not a group chat — and ask them to change it on first login. Every action is written to the audit log against the person's name.

Part 3 · Onboarding a branch

Repeat this part for every branch. About 30 minutes for the first one, 15 minutes after that.

> YOU NEED: `BRANCH_MANAGER` (OR `GENERAL_MANAGER` / `OWNER`).

Do these in order — each step depends on the one before.

3.1 The branch record

More → Operations → Branches → tap your branch.

Check the name, code, city, address and phone. If the branch manager is not set yet, you will be offered to set one — skip that for now, we come back in 3.4.

3.2 Vehicles

Vehicles tab → tap "Add vehicle" *(also: More → Operations → Vehicles)*

Every vehicle that will carry passengers or cargo needs a record before it can be assigned to a trip.

Field	Rule	Notes
Registration number	**Unique**, uppercase	e.g. `LAG-123-XY`. Appears on the live board and the waybill.
Type	Bus / Minibus / Truck	Pick the closest match
Seats	Number	Passenger capacity
Cargo (kg)	Optional	Leave 0 if the vehicle carries no freight
Branch	Your branch	
Status	Available	**Only "Available" vehicles can be assigned to a trip.**

Keep the status honest. A vehicle left on "Available" while it is in the workshop can be booked for a trip that cannot happen. Change the status when the vehicle goes off the road.

3.3 Drivers and conductors

Drivers: the **Home** screen → tap the **"Drivers on duty"** tile (for the list) or the **"Driver"** quick action (to add one) → **"Add driver"**. **Conductors: More → Operations → Conductors → "Add conductor"**.

	Driver	Conductor
Full name	✔	✔
Phone	✔	✔
Branch	✔	✔
Licence number	**Required**	—
Licence expiry	**Required**	—
Years of experience	Optional	—
Badge number	—	**Required**

> **Licence expiry drives the app.** The alerts engine watches it and raises a notification before it lapses. Enter the real date. The same applies to **vehicle documents** (roadworthiness, insurance) — check **Vehicles → your vehicle** and fill them in.

3.4 Staff accounts for this branch

More → Operations → Users → "Invite user"

Person	Role	Branch
The branch's boss	`branch_manager`	this branch
The branch's bookkeeper	`branch_accountant`	this branch
Crew	`driver`	this branch
Crew	`conductor`	this branch

Then set the branch manager:

More → Operations → Branches → tap your branch → set manager → pick the person you just created.

This matters: it is what makes the branch's cash-ups and reports show up under that branch rather than company-wide.

3.5 Routes

More → Operations → Routes → "Add route"

A route is a **journey**, not a street. "Lagos → Ibadan Express" is a route. If the same road runs three ways with different stops, that is three routes.

Field	Rule
Name	The name the crew will recognise
Type	Inter-state / Intra-state / Commuter / Special — this drives the permit rules
Origin branch / Destination branch	Tap to select. **They must be different.**
Origin city / Destination city	
Distance (km)	Used to compute fuel and expected revenue
Duration (hrs)	**Used to auto-fill the trip's scheduled arrival.** Get this right and trip scheduling works itself.
Passenger fare	Per seat
Cargo fare /kg	Per kilogram

> **Set the duration accurately.** TransitOS calculates a trip's scheduled arrival from this number. A wrong duration means trips show up "late" or "early" on the live board — the first thing a dispatcher will complain about.

Inter-state routes also need permits. The route form asks which permits the vehicle must hold (for example `interstate_license`). Check them against the vehicle's documents before the first trip.

3.6 Your branch is live

You now have a branch, its vehicles, its crew, its staff accounts and its routes. **Part 4 starts.**

Part 4 · Daily operations

4.1 The daily loop at a glance

```
Morning   Fleet manager      → log fuel for each vehicle going out
          Operations manager → create the day's trips
          Driver             → pre-trip checklist
          Conductor          → add the passengers and cargo to the manifest
During    Branch manager     → Start boarding → Confirm departure
          Operations manager → live board / live map
          Anyone             → report an incident
End of day Branch manager    → Confirm arrival → Close trip
          Conductor          → count the cash → Save cash-up → Submit for approval
          Chief accountant   → approve or reject the cash-up
```

The four evening steps — *Close trip*, *Save cash-up*, *Submit for approval*, *Approve* — are the money loop, and they are explained step by step in **Part 5**.

4.2 Log fuel — before the vehicle moves

YOU NEED: `fleet_manager`, `branch_manager`, `general_manager`, `owner`, `super_admin`.

More → Fleet → Fuel → tap "Log fuel"

Record the odometer and fuel level for each vehicle going out. TransitOS uses the logs to calculate efficiency per vehicle and to warn about low fuel.

4.3 Create the day's trips

YOU NEED: `operations_manager`, `branch_manager`, `fleet_manager`, `general_manager`, `owner`, `super_admin`.

Trips tab → tap "New trip"

Field	Where it comes from
Route	The routes you set up in 3.5
Vehicle	**Only vehicles with status "Available" are listed.** If one is missing, check its status.
Driver	From your branch's drivers
Conductor	From your branch's conductors
Date, Departure time	The actual plan
Scheduled arrival	**Filled in for you** from the route's duration. Check it — it is what the live board shows.

Only "Available" vehicles appear in the list. This is deliberate — it stops you booking a vehicle that is in the workshop. If a vehicle you expected is missing, open the **Vehicles** tab and check its status.

Trips tab → search box finds a trip later. Tap any trip to open it.

4.4 The pre-trip checklist

> **YOU NEED:** the `driver` on that trip (also open to supervisors).

Trips → tap a trip → Pre-trip checklist

Ten points, each marked Pass or Fail:

1. Tires & wheels
2. Brakes & lights
3. Mirrors & signals
4. First-aid kit
5. Fire extinguisher
6. Fuel level
7. Vehicle documents
8. Odometer reading
9. Engine oil & coolant
10. Driver signature

The screen shows progress ("4 of 10 complete") and flags a **Fail** loudly. **A failed item should stop the trip.** If a vehicle fails inspection, tell the branch manager, set the vehicle's status to `Maintenance`, and report it — do not depart.

4.5 The live board and the live map

> **YOU NEED:** `operations_manager`, `branch_manager`, `fleet_manager`, `general_manager`, `owner`, `super_admin`.

More → Operations → Live trips — every active trip and where it is. **More → Operations → Live map** — the same on a map, plus vehicle positions. The Home screen also has a map card and an "Open full map" button.

> **The map needs internet.** It draws map tiles from OpenStreetMap over the mobile network. Everything else in the app works without it — only the map goes blank. In poor signal, use the **Live trips** board instead; it works offline.

4.6 Scanning QR codes

> **YOU NEED:** the `driver`, `conductor`, or any supervisor.

Tap the **QR-code button in the bottom-right corner of the Home screen** to open the scanner. Point the camera at the QR code on a vehicle or a driver's document to pull up their record.

> The camera asks for permission the first time — allow it. If the camera does not open, check **phone Settings → Apps → TransitOS → Camera**.

4.7 Report an incident

> **YOU NEED:** `driver`, `conductor`, `branch_manager`, `operations_manager`, `fleet_manager`, `general_manager`, `owner`, `super_admin`.

Trips → tap a trip → Report incident, or **More → Fleet → Incidents → "Report incident"**.

Describe what happened. Incidents appear under **More → Fleet → Incidents** with a status; the branch manager acknowledges and resolves them.

4.8 Record expenses

> **YOU NEED:** `branch_manager`, `chief_accountant`, `branch_accountant`, `general_manager`, `owner`, `super_admin`.

More → Finance → Expenses → tap "Record expense" — branch expenses (fuel top-up, maintenance, tolls). Expenses are included in the settlement figures.

4.9 Log maintenance

> **YOU NEED:** `fleet_manager`, `branch_manager`, `general_manager`, `owner`, `super_admin`.

More → Fleet → Maintenance → tap "Log maintenance" — schedule or log work on a vehicle. The alerts engine raises a notification when maintenance falls due.

4.10 The app updates itself

You do not need to install anything when we fix a problem.

When we correct something, the corrected version is downloaded to your phone in the background while you are using the app. It is applied the **next time you open the app**.

So if a screen still looks like the old one:

1. Close the app completely — swipe it away from your phone's app switcher, not just the home button.
2. Open TransitOS again.
3. If it still looks the old one, open it once more. The first open after the fix downloads it; the second applies it.

Your trips, cash-ups and vehicle records are never affected by an update — they live on the server, not on the phone.

> **If you are on a test build**, the dashboard shows a yellow **Preview build** strip. Test builds receive test fixes and must not be used for live operations.

Part 5 · The money loop

> **Read this part before you go live.** It is the part of the app that carries money, and it is the part that changed most recently.

5.1 How the money flows

```
Trip created                    status: planned
  ↓  Start boarding  → Confirm departure  → Confirm arrival  → Close trip
Conductor adds the passengers and cargo to the manifest
  ↓
Cash-up saved                   status: draft
  ↓  Submit for approval
Cash-up submitted                status: submitted
  ↓  Approve / Reject
Cash-up approved                 status: approved
  ↓
Trip marked                      status: cashed_up
Settlement                       ready for payment
```

Every arrow in that diagram is a button in the app. Nothing has to be done through the command line.

5.2 The five screens

What you want to do	Where the button is
Move a trip to its next stage	**Trips** → **tap the trip** → the **Trip status** card at the top
Add a passenger or a parcel	**Trips** → **tap the trip** → **Manifest** → **+ Passenger** / **+ Cargo**
Remove a passenger who did not turn up	**Trips** → **tap the trip** → **Manifest** → the bin icon on that entry
Count the day's takings and declare them	**Trips** → **tap the trip** → the **Cash-up** card at the bottom
Send the cash-up for approval	On the trip screen (**Submit for approval**) or on **More** → **Cash Ups**
Approve or reject a cash-up	**More** → **Cash Ups** → tap a cash-up marked *Awaiting approval*

5.3 Step by step: a trip from `planned` to `cashed up`

Step 1 — open the trip. Go to the **Trips** tab and tap the trip.

Step 2 — move it along. The **Trip status** card at the top of the screen carries the current status and one button for the next stage:

The card says	Press	What happens
`Planned`	**Start boarding**	Passengers are getting on.
`Boarding`	**Confirm departure**	The vehicle left the terminal; the actual departure time is stamped automatically.
`Departed`	**Confirm arrival**	The vehicle reached the destination; the actual arrival time is stamped automatically.
`Arrived`	**Close trip**	The journey is over. The cash-up can now be recorded.
`Boarding` or `Planned`	**Cancel trip**	The trip is called off. You are asked for a reason, and it is kept on the trip and in the audit log. A reason is mandatory.

The order is enforced by the server: you cannot skip from *Planned* to *Departed*, and a closed trip cannot be reopened.

> **Who can move a trip:** branch manager, operations manager, general manager, owner and super admin. Everyone else sees the status card in read-only form.

Step 3 — fill in the manifest. Still on the trip screen, in the **Manifest** section:

- **+ Passenger** opens a form for a passenger: name, phone, seat number, the fare they paid, and whether it was paid on board or paid in advance.
- **+ Cargo** opens a form for a parcel: what it is, how many kilograms, the sender, the receiver's phone, the freight charge, and the payment status.
- The **bin icon** on any entry removes it. (This is how you correct a mistake — remove the entry and add it again.)

The manifest **locks when the trip departs**, because a passenger cannot board a vehicle that has already left.

> **Who can edit the manifest:** conductor, branch manager, operations manager, general manager, owner and super admin.

Step 4 — count the money. Scroll to the **Cash-up** card at the bottom of the trip screen. Enter how many notes and coins of each denomination the conductor is holding:

```
₦1,000   ₦500   ₦200   ₦100   ₦50   Coins (₦)
```

The card shows three figures as you type:

- **Expected (system)** — the sum of the manifest fares. This is what the trip *should* have collected.
- **Counted (physical)** — your denominations added up.
- **Variance** — counted minus expected. Green means the count is at or above expectation; red means a shortage.

Step 5 — save the draft. Press **Save cash-up**. The cash-up is saved as a **draft**: it is recorded against the trip but nobody in finance can see it yet. You can save it again to correct the count.

Step 6 — submit it. Press **Submit for approval**. The app asks the server for the official expected figure, works out the variance at that moment, and moves the cash-up to **submitted**. It now appears on **More → Cash Ups** under *Awaiting approval*.

You can also submit from the cash-ups list: **More → Cash Ups → Draft → Submit for approval** on the row.

> **Who can declare and submit:** conductor, branch manager, branch accountant, chief accountant, general manager, owner and super admin.

Step 7 — approve. More → Cash Ups → tap the cash-up. The review sheet shows the declared amount, the expected amount, the variance and the breakdown. Press **Approve** or **Reject**. A rejection needs a reason; the conductor sees it on the trip screen and can correct the count and submit again.

When a cash-up is approved, the trip flips to **cashed up** by itself.

> **Who can approve:** chief accountant, branch accountant, general manager, owner and super admin.

5.4 Where the "expected" figure comes from

The app compares what the conductor declared against what the manifest says the trip should have earned. So the variance is only as honest as the manifest.

- If the manifest is empty, the expected figure is **zero** and every cash-up will look like a large overage.
- If a passenger is removed with the bin icon, their fare stops counting at once — the trip's revenue, the waybill PDF and the cash-up's expected figure all drop together.

Rule of thumb: fill in the manifest before the vehicle departs, and correct it before the trip closes. Once the trip is closed, the manifest is locked and the cash-up is measured against exactly what was recorded.

5.5 Who can do what in the money loop

Action	Roles
Move a trip through its stages	Branch manager, Operations manager, General manager, Owner, Super admin
Cancel a trip (reason required)	The same list as above
Add or remove manifest entries	Conductor, Branch manager, Operations manager, General manager, Owner, Super admin
Save and submit a cash-up	Conductor, Branch manager, Branch accountant, Chief accountant, General manager, Owner, Super admin
Approve or reject a cash-up	Branch accountant, Chief accountant, General manager, Owner, Super admin
Read the cash-ups list	Everyone above, plus the branch roles that belong to that branch

Branch-scoped roles — branch manager, branch accountant and fleet manager — only ever see and change **their own branch's** records. A branch accountant in Lagos cannot open a cash-up belonging to Abuja.

5.6 If the numbers do not agree

What you see	What it means	What to do
"Trip must be 'closed' before cash-up, not 'planned'"	The trip has not been closed yet	Move the trip to *Closed* on the trip screen (**5.3**, step 2)
"Cannot add manifest to a trip in status 'departed'"	The trip has already left	The manifest is locked from *Departed* onwards. If the trip is not yet on the road, move it back is not possible — ask your dispatcher to correct the record
The expected figure is zero	The manifest is empty	Add the passengers and cargo while the trip is still *Planned* or *Boarding*
A negative variance	The conductor counted less than the manifest expected	Normal for a passenger who paid on board and did not pay. Check the manifest entry for that passenger — if it should have been *Cancelled*, remove it before the trip closes
"A cash-up already exists for this trip"	The trip already has a cash-up	Open the trip and **Save cash-up** again to correct it; do not create a second one
"Breakdown sum does not match declared_total"	The figures sent do not add up	This is a server-side refusal. Retake the count and save again

Part 6 · When something goes wrong

What you see	What it means	What to do
"Invalid email or password"	Wrong email, wrong case, or Caps Lock	Type the email in lower case. If it still fails, ask the branch manager to check the account is Active.
"Trip must be 'closed' before cash-up"	The trip has not been closed	Open the trip and press **Close trip** in the **Trip status** card (**5.3**).
A vehicle is missing from the trip form	Its status is not "Available"	**Vehicles tab** → set it to Available (only if it genuinely is)

What you see	What it means	What to do
"You cannot assign a role more senior than your own"	A branch manager tried to create a manager-level account	Only `owner` / `general_manager` / `super_admin` can create branch managers and above.
"branch_id is required for this role"	A driver or conductor was created without a branch	Pick the branch. These four roles must belong to a branch.
A section is missing from the More menu	Your role does not have it	See **Appendix A**. Ask your branch manager or head office.
The map is blank but everything else works	No data connection for the map tiles	Use **More → Operations → Live trips** instead.
The camera will not open	Permission denied	**phone Settings → Apps → TransitOS → Camera → Allow**
A request hangs, then fails	No connection to the API server	Check your signal; tell the developers if it happens on Wi-Fi too.
The app shows stale data	Cached data	**More → System → Sync**, then reopen the screen.
A screen still shows the old version after we fixed it	The corrected version has been downloaded but not applied yet	Close the app completely and open it again — twice if needed. See **4.10**.
The app behaves oddly after hours open	Long-lived session	Close the app fully and reopen it.

Appendix A · Who can see and do what

Sections — which role finds which part of the app:

Section	Where it is	Roles
Branches	More → Operations	SA, owner, GM, BM, OM
Users	More → Operations	SA, owner, GM, BM
Vehicles	Vehicles tab / More → Operations	SA, owner, GM, BM, OM, FM
Drivers	Home → "Drivers on duty"	SA, owner, GM, BM, OM, FM
Conductors	More → Operations	SA, owner, GM, BM, OM, FM
Routes	More → Operations	SA, owner, GM, BM, OM, FM
Trips	Trips tab	everyone, including driver and conductor
Live trips / Live map	More → Operations	SA, owner, GM, OM, BM, FM
Cash-ups	More → Finance	SA, owner, GM, BM, CA, BA, conductor
Expenses	More → Finance	SA, owner, GM, BM, CA, BA
Settlements	More → Finance	SA, owner, GM, BM, CA, BA
Reports	Reports tab	SA, owner, GM, BM, OM, FM, CA, BA
Fuel / Maintenance	More → Fleet	SA, owner, GM, BM, FM
Incidents, Transfers	More → Fleet	SA, owner, GM, OM, BM, FM
Audit log, Role permissions	More → System	SA, owner, GM

Section	Where it is	Roles
Notifications, My devices, Sync	More → System	everyone

Who can create what — the button only appears for these roles:

What	Button	Roles that can create it
A branch	Add branch	SA, owner, GM, BM
A user	Invite user	SA, owner, GM, BM
A vehicle	Add vehicle	SA, owner, GM, BM, OM, FM
A driver	Add driver	SA, owner, GM, BM, OM, FM
A conductor	Add conductor	SA, owner, GM, BM, OM, FM
A route	Add route	SA, owner, GM, BM, OM, FM
A trip	New trip	SA, owner, GM, BM, OM, FM
A fuel log	Log fuel	SA, owner, GM, BM, FM
A maintenance record	Log maintenance	SA, owner, GM, BM, FM
An expense	Record expense	SA, owner, GM, BM, CA, BA

Bottom tabs — what each role sees on the home bar:

Role	Tabs
SA, owner, GM, BM, OM, FM	Home · Trips · Vehicles · More · Reports · Profile
chief accountant	Home · More · Reports · Profile
branch accountant	Home · Trips · More · Reports · Profile
driver, conductor	Home · Trips · More · Profile

Cash-up approval is restricted to `super_admin`, `owner`, `general_manager`, `chief_accountant` and `branch_manager`.

> **One role, one screen.** If someone asks for a role they do not need, they will see less of the app — and that is the point. A conductor sees their own trips, not the company's.

Appendix B · The life of a trip

Status	What it means	Who moves it	The button
`planned`	Scheduled, not yet started	Created by the dispatcher	—
`boarding`	Passengers boarding	Branch manager, Ops manager, GM, Owner, Super admin	**Start boarding**

Status	What it means	Who moves it	The button
`departed`	On the road	Same	**Confirm departure**
`arrived`	At the destination	Same	**Confirm arrival**
`closed`	Journey finished, ready to count the money	Same	**Close trip**
`cashed_up`	Money counted, submitted and approved	The system, when the cash-up is approved	—
`cancelled`	Trip will not run	Same	**Cancel trip** (a reason is required)

The order is enforced by the server: an out-of-order move is refused. `cashed_up` is not set by hand — the app sets it when a cash-up is approved, so a trip can never reach it without the money being accounted for. See **Part 5.3** for the step-by-step.

Appendix C · Words you will meet

Word	Meaning
Branch	One operating location — a depot or terminal. Everything in the app belongs to a branch.
Route	A journey between two places, with its distance, duration and fares.
Trip	One vehicle, one driver, one conductor, one route, one departure. The operational unit of the app.
Manifest	The list of passengers and cargo on a trip. It is what the expected revenue is calculated from.
Cash-up	The money the conductor counted at the end of a trip, broken down by payment method (cash, transfer, POS).
Variance	The difference between what was declared and what the app expected. Negative = a shortage.
Settlement	What the company owes a branch or a crew member once trips, expenses and cash-ups are netted off.
Pre-trip checklist	The ten-point vehicle inspection the driver completes before departure.
Live board	The screen showing all active trips and where they are.
Scanning	Reading a QR code on a vehicle or document with the phone's camera.
Audit log	A permanent record of who did what, and when. Only head office can read it.
Alerts	Notifications raised automatically — expiring licences, due maintenance, low fuel.
Branch-scoped role	A role that belongs to one branch and only sees that branch's records.

A last word

The app is strong on **fleet, people and journeys**: vehicles, drivers, conductors, routes, trips, the live board, inspections, incidents, maintenance, fuel, documents and alerts all work and are audited.

It is now **strong on money as well**. The money loop described in Part 5 runs end to end inside the app: the trip moves through its stages, the manifest records who travelled and what they paid, the conductor counts the takings and declares them, an accountant approves or rejects the declaration, and the trip closes as *cashed up*.

Two habits keep the numbers honest:

1. **Fill in the manifest before the vehicle departs.** It locks after that, and the cash-up is measured against it.
2. **Declare the cash the same day the trip closes.** A draft cash-up is invisible to finance until it is submitted.

Until finance signs off on the app as the system of record for cash, keep reconciling against your existing cash sheet for the first month.

If anything in this guide does not match what you see on the phone, **tell us which screen and what you expected** — that is the fastest way to get it fixed, and we would rather fix it than have you work around it.
